

Graduate Program in Public Health

About the Program

The informatics master of public health (iMPH) is a two-year graduate program that prepares public health professionals to manage, analyze and disseminate personal and population health-related information.

The program provides a comprehensive and integrated educational experience encompassing public health, health informatics and health administration.

Graduates manage information of health care organizations, public health agencies, health data organizations, research institutes and private industries.

With an MPH in health informatics from the Medical College of Georgia you can lead the way to a better understanding of health and disease for the advancement of human health care.

Professional faculty dedicated to providing you with an outstanding education.

Admission Requirements

- Bachelor's degree or equivalent
- Official transcripts for all post-secondary education
- GRE scores*
- Three letters of recommendation
- Computer Literacy and access to an internet-connected computer

*The GRE requirement may be waived for applicants holding an earned doctorate from an accredited U.S. university.

Deadline

The deadline for the submission of completed applications and for the submission of all supporting application materials and documentation is July 1. Applications and supporting materials received after this deadline will be considered on a space-available basis only. Early application and early submission of all application materials is strongly encouraged. To apply, visit www.mcg.edu/students/GradPgms.

iMPH

The *informatics* master of Public Health Program prepares leaders who manage, analyze, disseminate and apply information to enhance wellness and quality of life for individuals and communities.

Medical College of Georgia
School of Graduate Studies

The ultimate goal is a healthier society.

“...with a sharp rise in lifestyle-related diseases and a growing shift from acute to chronic care, MCG's emphasis on public health is particularly timely. Two factors have converged: an unprecedented opportunity to shape wellness and quality of life at the societal level, and the technological advances to expedite the process.”

-MCG President Daniel W. Rahn, M.D.

Curriculum

Traditional Courses

- Biostatistics
- Epidemiology
- Data Management and Knowledge Discovery

Intensive Week Course

- Health Decision Support Systems

Internet-based Courses

- Environmental Health
- Computerized Health Information Systems
- Public Health Informatics
- Health Promotion
- Health care Information Requirements and Standards
- Healthcare Data Content & Structure
- Health Care Management Principles
- Health Law and Ethics
- Health Care Financial Management
- Human Resources Management
- Health Care Performance Improvement
- Health Information System Analysis and Project Management

Practice-based Courses

- Summer Internship
- Capstone Course

Encompassing public health, health informatics and health administration

The mission of public health is to fulfill society's interest in assuring conditions in which people can be healthy.

The way we manage and disseminate health information leads to a turning point in decision-making. Health informatics is the sine-qua-non of optimal decision-making and improved health outcomes.

Health informatics is the discipline that optimizes information technology to improve health care.
