Screening #

Study #

The details of this research study were discussed with the patient/subject and parent(s)/legal representative by . Risks/Benefits and alternatives were explained. Confidentiality issues were discussed. The patient/subject read the research children's assent document and the parent(s)/legal representative read the parental informed consent document or it was read to them. Questions were answered. HAC-approved research children's assent document, version was signed by the patient/subject and witnessed in the presence of an HAC-approved investigator. HAC-approved research parental informed consent document version was signed by the parent(s)/legal representative (relationship: ) and witnessed in the presence of an HAC-approved investigator. A copy of the research children's assent document and parental informed consent document were sent to Health Information Management Services (HIMS) for scanning/filing into the patient/subject's medical record, both originals were filed in the research chart, and copies were given to the parent(s)/legal representative. No activities specifically related to the research were started until after the execution of the consent. Once consent was accomplished, the following research related procedure(s) took place:

The patient/subject will return on at for the next research study visit.
